SPECTOR® SERVER SURVEILLANCE EDITION Server Admin Surveillance and Investigation Software

Spector is the world's most popular Internet Monitoring and Surveillance solution, with more than a quarter million installations, and with three PC Magazine Editors' Choice awards.

Now, Spector Server Surveillance Edition is available for keeping an EXACT VISUAL RECORD of any administrator logging into your server's desktop to configure, manage or control server applications.

Spector Server keeps a VISUAL log, so that you can see EXACTLY what you, your IT staff, managed host providers or other privileged users do whenever they login, check on and make changes to your database, email, web, network or file servers.

Spector Server's first and primary method of keeping a VISUAL log is to take SCREEN SNAPSHOTS, as frequently as once per second, to make sure you have an exact and complete record of all logins and sessions. You then play back the screen snapshots to see the EXACT ORDER of what each logged-in administrator has been doing.

In addition, Spector Server monitors keystrokes typed, program/application activity, file transfers, session activity, web sites visited and online searches.

When a server problem needs to be investigated, the impact of being able to REVIEW the actions of every user and PLAYBACK their sessions is invaluable.
